## DIAMOND COLLAGEN OLIDIAMOND

Collagen Stimulator

"The beautifulness from your owned Collagen."

[Internal Use]

This product is a medical device indicated for treatment of severe facial wrinkles and folds, replacement of volume defects, facial lipoatrophy and improvement of facial contour deformities. Before using OLIDIA®, please read the "Instructions for use" thoroughly or consult with physicians.

## What is Olidia ?

Olidia is a safe and effective non-surgical technique. It is composed of Poly-L-lactic acid (PLLA) and is injected into the skin. Olidia penetrates the deep layers of the skin, stimulating and activating collagen-producing cells. It then breaks down and is absorbed, causing no harm to the body.

As the **Olidia** PLLA microparticles are absorbed by the skin, they stimulate collagen production, creating a framework that helps restore facial volume.

As we age, our body naturally produces less collagen, the protein responsible for youthful skin's plumpness and elasticity. By our forties, many of us have lost around 20%, leading to wrinkles and sagging. Unlike fillers and Botox that address wrinkles directly, Olidia takes a different approach. This innovative injectable treatment stimulates your body's natural collagen production, leading to gradual restoration, reduced wrinkles and fine lines, improved volume for a more youthful look, and tighter, firmer skin. If you're seeking a natural way to restore your youthful appearance, Olidia is definitely the right choice for you.

## Why is collagen important as we age?

- The loss of collagen due to aging weakens the internal structure of your skin, reducing its ability to maintain elasticity and moisture.
- The internal loss of collagen can lead to the appearance of lines, wrinkles, and deep folds, as well as a loss of skin volume and support.
- Traditional fillers may address fine lines and wrinkles, but they don't target the underlying collagen loss that contributes to sagging and loss of structure.

## Expected Results

### When to Expect Results from Olidia :

Olidia injections offer a gradual approach to collagen stimulation, leading to natural-looking results. The timeframe for seeing the full effects depends on the number of treatment sessions needed:

For patients requiring only one session, results typically become visible within 2-3 weeks.

If you require a series of treatments, you can expect to see progressive improvement over the course of the treatment plan. The final results are usually achieved within 3 weeks after the final treatment session.

80% of patients remained satisfied with their treatment results 25 months after their last injection.

- The length of your Olidia treatment plan is personalized based on your desired outcome. Patients requiring multiple sessions may undergo treatments spread over 6 months (approximately 24 weeks).
- Gradual and impressive results appear without the patient showing any signs of using any technique or procedure. The results typically last from two to three years, compared to other techniques that usually last only a few months.
- To maintain long-term results, Olidia can be injected once a year, providing an effective way to maintain appearance at a lower cost.

---

## How It work ?

---

Olidia is a biocompatible synthetic material made from Poly-L-lactic acid, a natural substance found in the human body. Therefore, there is no need for an allergy test before undergoing Olidia treatment. However, to reduce bleeding, it is recommended to stop taking anti-inflammatory medications several days before the treatment.

---

## Preparation for Olidia Injection

---

Initially, the injection areas are identified, by your physacian, then sterilized thoroughly. A local anesthetic is applied to ensure patient comfort and eliminate pain during the injection. Olidia is then injected into the targeted areas.

---

## Advantages of Olidia Injection:

---

- Extremely safe.
- Immediate return to daily activities.
- Long-term natural-looking results.
- Gradual and natural appearance changes.
- Provides up to 80% skin improvement.
- Long-lasting results, up to two years.
- Brightens the face after eliminating dullness.
- Efficient for both genders and suitable for all skin types.
- Does not cause allergies as it is a substance naturally found in the body.

---

## Contraindications

---

Not recommended for pregnant or breastfeeding women. Not advised for individuals with heart diseases. Not for use in individuals under 18 years old or those with immune disorders.

---

## Number of Sessions

---

To achieve the desired aesthetic goals, approximately 3 sessions are needed, and in some cases, up to 6 sessions.

**Session Duration:** Each Olidia injection session usually takes 15-30 minutes, depending on the size of the areas and the number of injections used.

---

## The Perfect Dose

---

The dosage depends on the patient's age and condition. Typically, one injection of Olidia is needed per session. However, women aged 45 may need 3-4 injections to eliminate deep facial wrinkles, while women aged 60 may need 5-6 injections to correct hollow cheeks or severe volume loss in the chin area.

---

## Prohibited Areas for Olidia Injection:

---

Olidia injections are not approved for use in the lips or eyelids.

- Cellulite correction and sagging skin.
- Chest, elbow, and knee wrinkle treatment

Additional areas that Olidia injections can effectively treat and add volume to Buttocks, Breast Enlargement, Vaginal tightening.

Important Note: Individual results may vary. During your consultation, your doctor will discuss your specific needs and provide a more precise timeframe for achieving your desired outcome.

## Olidia After Care

Olidia injections allow you to return to normal activities and daily life immediately after the injection. Swelling, bruising, and side effects are usually mild and disappear within a few days. To help speed up recovery, you can follow these instructions:

- Apply cold compresses to the injected area for a few minutes at a time during the first 24 hours.
- Avoid sun exposure and tanning sessions, and use sunscreen with at least 30% protection.
- Massage the area for five minutes at a time, five times a day, for five days.
- Avoid applying cosmetics for the first six hours.
